## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. The rejection of Claims 1 and 6 under 35 U.S.C. 112, second paragraph, is withdrawn because of the amendment filed 6/6/2006.

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. The rejections of Claims 1 and 6 under 35 U.S.C. 112, first paragraph, are withdrawn because of the amendment filed 6/6/2006.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hauser et al (6312812).

'812 teaches treating ferrous and nonferrous metals with a composition that may combine a first pretreatment and second pretreatment (see Abstract; 12:60-62) that comprises Zr, Ti or Hf (4:53-60) at preferably 100-1000 ppm metal (5:17-34), F (5:4-16, claim 26), an amino-group containing silane (trimethoxy silyl propylaminobis(methylenephosphonic)) (9:52-53), resins such as an aminoplast or polyisocyanate (5:35-6:11), an amine-containing resin (10:28-11:8), and which may contain a silicon-containing cpd (claim 27) or zinc (claim 30). The presence of silicon or zinc inherently reduces the F level. Because the presence of Si or Zn is one of the methods used by applicant to reduce the F level to <10%, it is expected that the presence of Si and Zn in the '812 process will also reduce the F level to <10% in the '812 process.

'812 is not required to employ phosphorus atoms in the pretreatment, and where phosphorus containing materials are used, they may be in the form of ions other than phosphate,

such as phosphite or phosphonite (8:43-49), thus meeting the limitation of no phosphate ions (claim 1).

#### Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erma Cameron whose telephone number is 571-272-1416. The examiner can normally be reached on 8:30-6:00, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Meeks can be reached on 571-272-1423. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
